

ScottTech, LLC has partnered with iWay Software, an Information Builders company and an innovator of enterprise integration solutions, to provide an integration interface to their warehouse management and inventory control software system. iWay Software's integration methodology is to use a single, integrated set of graphical design tools to assemble powerful pre-built components for enterprise-class B2B, A2A, or B2B2A integration scenarios - without the use of custom code. ScottTech will resell iWay's SAP and other ERP adapters for connecting to Celution Software's PickPro WCS™. With this alliance, ScottTech will experience quicker integration of SAP into their Warehouse Control System, and customers will experience lower interface costs and quicker integration of PickPro WCS™ into their business systems.

## **iWay Software's Application System Adapter for SAP**

The Application (Sys) Adapter For SAP allows an organization to fully integrate its SAP, mySAP Business Suite, and SAP Portals application systems with virtually any other legacy system, DBMS, EDI, B2B, ERP, SCM, or CRM application on any platform. High-speed, low-impact, non-intrusive access to and from SAP exposes the critical business logic and data contained with SAP for reuse: the key to building a successful e-business application or integrated enterprise.

The iWay SAP Adapter provides a scalable, high-speed, lightweight solution that runs within a message broker or application server environment, enabling and reusing SAP R/3 modules and BAPIs to be incorporated into new application initiatives. No modifications or recoding is necessary on the SAP R/3 system.

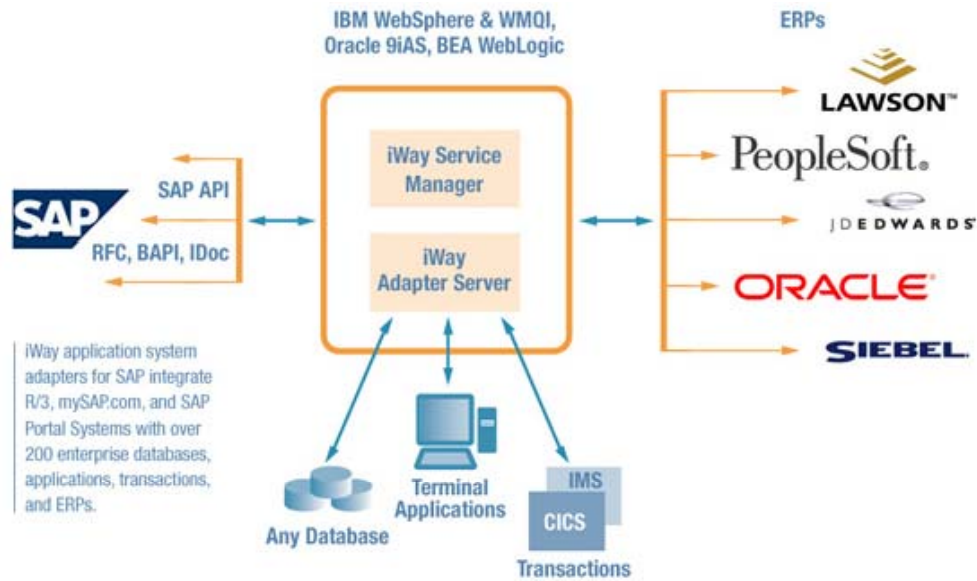

The iWay adapter technologies offer developers these advantages:

- Rapid creation and integration of B2B transactions, using XML or non-XML EDI formats such as ANSI X.12, UN/EDIFACT, and SWIFT
- Extend packaged and e-business applications systems, based on Java, XML, SOAP, and Web Services, without requiring any custom coding
- Reduce the cost in extending packaged applications into a B2B trading partner management, based on standards such as ebXML, .NET, and Web Services
- Provide a common development environment integrated inside of multiple message brokers and application servers
- Uniform XML Interface for all packaged applications thus reducing the requirement for specific packaged applications native API knowledge
- Bidirectional adapter functionality to automate integrated event-driven input capability to integrate real-time transactions
- Document conversion from proprietary XML to standard XML, EDI formats, SQL, and RPCs to other application systems
- Protects investment in legacy databases, ERP, CRM, SCM, and homegrown "legacy" applications modules

iWay Software's SAP capabilities enable the following:

- Powerful display and control options for SAP BW hierarchies, including the ability to take full advantage of SAP BW hierarchies through a drag-and-drop interface
- Integration with the SAP data dictionary, providing direct access to user-friendly business descriptions and comprehensive metadata
- Flexibility to access BW InfoCubes directly or leverage existing BEx queries
- Customizable metadata views that are easy to understand and change without impacting the SAP BW environment
- Dynamic generation of ABAP code via the SAP R/3 adapter, enabling complex reporting with cross-module joins and reducing the need for ABAP programming resources

## iWay Software SAP Adapter Integration Framework

The Application (Sys) Adapter For SAP adheres to the SAP ABAP serialization rules published by SAP AG. Point-to-point computing environments are often restrictive, providing very little flexibility for change. By using the Application (Sys) Adapter For SAP in combination with iWay Service Manager, true integration of SAP with all your various disparate applications is not only possible, it is downright easy.

### About iWay Software

iWay Software has been an innovator in the enterprise integration market for more than 10 years. The company's integration methodology is simple: it uses a single, integrated set of graphical design tools to assemble powerful pre-built components for enterprise-class B2B, A2A, or B2B2A integration scenarios – without the use of custom code. The company delivers the fastest, most cost-effective, and simplest way to integrate and streamline critical business processes. iWay Software's vendor, platform, and protocol-neutral integration solutions fulfill the promise of SOA: true reusability.

iWay Software's rapid integration solutions help companies both large and small meet new business challenges without making their vital information investments obsolete. The company truly fulfills its motto: "iWay: Because Everything Should Work Together." With revenues topping \$50 million in 2006, iWay Software is among the top 10 integration vendors worldwide and works with many Fortune 500 companies.
