

The latest and greatest

How do you speed up your business?

Making smart technology choices are a great way to help your business run more efficiently. Deploying the latest technologies can help your people to be more productive, and keep your organization secure.

That's why ScottTech develops products that are supported on Windows® 7, SQL Server 2008, and Windows Server® 2008 R2 platforms. PickPro WCS™ offers the highest levels of security control and reliability. You'll also enjoy impressive system performance and resource management, as well as intuitive user interface features.

PickPro WCS™ is a powerful yet easy to use warehouse control system for stockroom and distribution center environments.

PickPro WCS™ is available in either single or multiple workstation versions, operating standalone or networked depending on the customer's needs.

PickPro WCS™ can control multiple automated horizontal or vertical carousel pods, flow rack, Pick to Light shelving and many other bulk storage locations. It maintains and manages all inventory items in locations, and controls all of the picking, put away, and cycle count processes.

The PickPro WCS™ mobile computer module works with or without voice on Motorola/Symbol, Intermec, and other handheld wireless devices.

PickPro's intuitive graphical user interface minimizes the need for extensive training and allows customers to begin working productively with the software in a very short time.

- Built on secure and scalable Microsoft® technology.
- Customizable for your unique business requirements.
- Available today for integration at your company!

Find out more about how PickPro WCS™ helps you build a strong foundation for your business.
